Lecture-15
Cloud Console Mobile App

The cloud console mobile app provides another way for you to manage services running on GCP directly from your mobile device. It is a convenient resource that does not cost anything extra.

(Refer Slide Time: 00:13)

The cloud console mobile app is available for iOS and Android and offers many capabilities. It allows you to stay connected to the cloud and check billing, status and critical issues. To see the health of your service at a glance you can create your own custom dashboard showing key metrics such as CPU usage, network usage, requests per second, server errors and more. You can take action to address issues directly from your device such as rolling back a bad release.

Stopping or restarting a virtual machine, searching logs or even connecting to a virtual machine via SSH. The monitoring functionality allows you to view and respond to incidents errors and logging.
